

# Summary of Our Services

2024

Valerity manages a wide array of services on behalf of our clients as a dedicated cybersecurity partner. While we manage every type of cybersecurity control across our portfolio of clients, new clients tend to begin with one of these three initial engagements.

## Fractional CISO

We provide a seasoned cybersecurity professional (15+ years' experience, including as a CISO for other businesses) to help create and manage a cybersecurity program, implement controls (both technical and non-technical), report on outcomes, and define and iterate a cybersecurity strategy for a fraction of the cost of a full-time CISO with similar expertise. This tends to be most helpful if your organization has limited cybersecurity personnel and knowledge and would benefit from the kind of leadership a seasoned professional provides.

## Cybersecurity Certifications

If your business is pursuing, or will soon be required to pursue, compliance with a certification or regulatory standard (e.g. SOC 2, ISO 27001, PCI, et cetera), we will work in concert with the associated auditing organizations to manage that compliance program on your behalf. Our experts will walk you through gap analysis with the auditor, help to implement, update, or repair controls to remediate any gaps found, and then manage and iterate all of those controls after the successful audit has concluded, integrating them into your overall security program.

## Cybersecurity Capacity Augmentation

Sometimes our clients have an internal cybersecurity team that is underwater due to a variety of demands coming from internal policies and requirements or external (client or vendor) requests. We can provide strategic, engineering, and analyst resources to partner with internal IT and cybersecurity professionals to clear that work backlog and ensure that internal resources that are needed elsewhere do not remain trapped by inescapable cybersecurity demands.
